What Is CBD?

- Cannabidiol (CBD) is the non-psychoactive ingredient in cannabis extract and has been demonstrated to be effective for a number of medical conditions.
- Its action is through different biological targets in human body, including cannabinoid receptors and other neurotransmitter receptors.

CBD Benefits the Following Medical Conditions*:

Acne, Alzheimer, Amyotrophic lateral sclerosis, Anxiety, Asthma, Attention deficit hyperactivity disorder, Autism, Cancer, Depression, Diabetes, Dyskinesia, Epilepsy, Fibromyalgia, Glaucoma, Heart heath, Huntington's disease, Infection, Insomnia, Irritable bowel syndrome, Loss of appetite and body weight, Mad cow disease, Migraines, Muscle spasms, Multiple sclerosis, Parkinson's disease, Pain, Psoriasis, Rheumatoid arthritis, Schizophrenia, Seizure, Substance abuse/withdrawal.

*Except Epilepsy, these claims are not approved by FDA, although there are case studies and testimonials.
